PROFESSIONAL SUMMARY

Detail-oriented QA Automation Test Engineer and 2026 Computer Science & Engineering graduate (Anna University), specializing in Selenium WebDriver, Java, TestNG, and the Page Object Model (POM). Hands-on experience designing scalable UI automation frameworks and API test suites (REST Assured, Postman), with a strong foundation in SDLC/STLC, functional, regression, and data-driven testing. Currently gaining industry experience as a Software Test Engineer, seeking to deliver reliable, well-tested software through robust automation.

CORE SKILLS

Test Automation: Selenium WebDriver, TestNG, Page Object Model (POM), Data-Driven Testing (DataProvider), Cross-Browser Testing, Parallel Test Execution

API Testing: REST Assured (RequestSpecBuilder, ResponseSpecBuilder, POJO), Postman (Collections, Environments, Assertions, Token Generation)

Testing Concepts: Manual, Functional, Regression, Unit/Integration Testing, STLC

Programming & Database: Java (Core, OOP), Python (Basic), SQL

Tools & Version Control: Git, GitHub, Maven, Jira, ExtentReports

Web Technologies: HTML5, CSS3, Bootstrap, JavaScript (Basic)

AUTOMATION TESTING PROJECTS

E-Commerce Web Application — Automation Test Framework

Selenium WebDriver, TestNG, Java, POM, REST Assured, Postman, Maven

- Built a scalable Selenium + TestNG framework with POM architecture, reducing code duplication.
- Implemented data-driven testing using TestNG DataProvider with Excel/CSV datasets.
- Developed custom listeners for screenshot capture, HTML reporting, and failure logging.
- Configured parallel cross-browser execution across Chrome, Firefox, and Edge to speed up test execution.

FINAL YEAR ACADEMIC PROJECT

AI-Driven Cardiovascular Risk Stratification Using Vital Health Indicators — University College of Engineering Arni (Anna University), Dept. of CSE

2025 – 2026

Python, TensorFlow/Keras, Scikit-learn, SMOTE, Streamlit

Team project (4 members) — B.E. final year project, Department of Computer Science and Engineering.

- Co-developed an AI-driven risk prediction system using a Deep Neural Network (DNN) trained on clinical indicators (age, blood pressure, cholesterol, heart rate, DIP, angiogram data).
- Applied SMOTE to correct class imbalance and improve detection of high-risk cases.
- Planned and executed Unit, Integration, System, and Performance Testing to validate model accuracy and reliability.
- Built a Streamlit-based interface for real-time data entry and risk-level classification (Low/Moderate/High).

INTERNSHIP EXPERIENCE

Python Full Stack Developer Intern — BICS Global, Chennai

Jul 2025 – Aug 2025

- Built web applications using Python (Flask) for backend routing, logic, and API handling.
- Developed responsive frontend components using HTML, CSS, JavaScript, and Bootstrap.
- Collaborated with the team to integrate frontend and backend modules, testing functionality across pages.
- Debugged and resolved application issues, ensuring smooth end-to-end functionality before deployment.

EDUCATION

B.E., Computer Science and Engineering — University College of Engineering Arni, Anna University

2023 – 2026

CGPA: 7.6 | Department of Computer Science and Engineering

Diploma in Mechanical Engineering — Rajagopal Polytechnic College

2020 – 2023

Percentage: 86%

SSLC — S.V.J.M. Higher Secondary School, Virinchipuram

2019 – 2020

Percentage: 66%
