PROFILE

Passionate and self-taught junior web developer with a solid foundation in HTML, CSS, JavaScript, Python, and database management systems. Skilled in building responsive, user-friendly websites and front-end interfaces. Quick to learn new technologies and eager to contribute to real-world projects. Seeking an entry level role to apply my knowledge, grow professionally, and collaborate with a dynamic development team.

SKILLS

- **Proficient:** Python, Flask, Java, Html , Css , Bootstrap , Sql , Github

EDUCATION

- **ANNA UNIVERSITY** Arni campus
B.E, COMPUTER SCIENCE AND ENGINEERING; CGPA: 7.44 2023 – 2026
- **RAJAGOPAL POLYTECHNIC COLLEGE** Gudiyatham
DIPLOMA IN MECHANICAL ENGINEERING; percentage: 86 2020 – 2023

EXPERIENCE

- **BICS GLOBAL** chenmai
Python Developer July 2025 - Aug 2025
 - **Task Management System::** Developed a complete Task Management web application using Python (Flask), including task creation, editing, deletion, user login, and status tracking.
 - **Backend Development::** Implemented Flask routing, templates (Jinja), session handling, and database connectivity for storing and managing tasks effectively.
 - **Internship Work::** Worked on backend logic, CRUD operations, form handling, and overall application functionality during a 1-month Python Developer internship..
 - **Tech Stack::** Python, Flask, HTML/CSS, SQLite/MySQL

PROJECTS

- **Hand Sign Detection System (July 2025):**
 - Developed a real-time Hand Sign Detection System using Python, OpenCV, and Ultralytics YOLOv5, capable of detecting multiple hand gestures from live video streams with high precision.
 - Performed dataset preparation and model training by leveraging YOLOv5 for custom object detection, enabling robust recognition of various hand signs across different lighting and background conditions.
 - Implemented a complete inference pipeline including preprocessing, detection, and visualization, achieving smooth real-time performance suitable for gesture-based control and human-computer interaction applications.
- **Task Management System using Python (July-Aug 2025):**
 - Developed a Task Management Web Application using Python (Flask) to allow users to create, update, categorize, and track tasks through a clean and responsive interface.
 - Implemented backend features including task CRUD operations, session handling, and data storage using structured models, ensuring smooth interaction between UI and server.
 - Designed a modular and scalable architecture, integrating Flask templates, routing, and form handling to deliver a lightweight, efficient, and user-friendly productivity tool.

ACHIEVEMENTS AND RESPONSIBILITIES

- **Symposium Website:**
Developed a responsive and user-friendly symposium website for my college, enabling smooth event registration and information access.
